Skydio Cloud
Autonomous Connected Flight Operations

Skydio Cloud delivers a suite of advanced cloud services and robust APIs that unlock the power of drones for efficient use at scale, acting as the foundation for connected flight operations and tight integration with a broad ecosystem of partner solutions.

Skydio Cloud seamlessly connects with your Skydio 2+ and Skydio X2 drones to make flight-collected data—including telemetry, photos, videos and Skydio 3D Scan models—easily accessible to your organization, in real time.

Current enterprise drone operations are siloed between hardware and management solutions. Users are forced to rely on mobile app integrations, or manual uploads to make data broadly available. To unlock the power of drones at scale, flight operations require an interconnected platform to collect all data, search through it, and share it freely across the organization.

Actionable Data Where and When Needed

Skydio Cloud delivers a suite of advanced cloud services and robust APIs that unlock the power of drones for efficient use at scale, acting as the foundation for connected flight operations and tight integration with a broad ecosystem of partner solutions.

Skydio Cloud seamlessly connects with your Skydio 2+ and Skydio X2 drones to make flight-collected data—including telemetry, photos, videos and Skydio 3D Scan models—easily accessible to your organization, in real time.

Designed and assembled in the USA
Trust Your Cloud Architecture

Skydio Cloud runs on AWS - US Region cloud infrastructure, which ensures that the data sent to the cloud never leaves the US unintentionally. Skydio Cloud includes the following services:

### AVAILABLE NOW

**Skydio Fleet Manager**

Allows organizations to automatically upload flight telemetry directly from the Skydio Enterprise App, from a mobile device or from the Skydio Enterprise Controller.

- Automatically upload flight telemetry
- Quickly search for flights across your organization
- View and replay the flight path and telemetry for any flight
- Access to flight data via cloud dashboard and API

**Skydio Media Sync**

Enables organizations to automatically upload media directly from Skydio vehicles via WiFi, eliminating the need to manually manage SD cards.

- Automatically connect vehicles to your WiFi network
- Seamlessly upload media simply by plugging a vehicle into power
- Store, Search and Share media across your organization

### COMING SOON

**Skydio Streaming**

Real-time visibility from any browser or mobile device.

- Live Situational Awareness shared with anyone in your organization
- Multiple connectivity options including Enterprise Controller, mobile Enterprise App, or the vehicle itself.

**Skydio Remote Ops**

Groundbreaking teleoperation capability, powered by Skydio Autonomy™

- Real-time visibility from any browser or mobile device, backed by enterprise-grade security
- Fly remotely indoors and outdoors* with industry-leading obstacle avoidance

*Subject to Civil Aviation Administration approval
